SUMMARY

5 years in mobile development. Designed and shipped 4 large products and 10+ utility apps from scratch. Domains: fintech (mobile bank, 20,000 customers in the first 3 months) and B2C (social app, 60,000 MAU). Primary stack Swift, SwiftUI, UIKit; secondary React Native + TypeScript. I own the whole delivery: mobile client, backend integration, subscriptions and monetization, analytics, CI/CD, App Store review. AI-native workflow (Claude Code, Codex): I design, delegate, review and ship to production.

EXPERIENCE

LovOn · Senior iOS Engineer, Mobile Team Lead · Aug 2024 – present

B2C relationship app with a voice AI assistant, 60,000+ MAU.

- Designed and built the iOS app from scratch (Swift, SwiftUI, UIKit, MVP-C) and brought it to a stable App Store release.
- Implemented voice conversations with an AI assistant via LiveKit and RetellAI, including the server-side integration and prompt tuning.
- Built a multi-tier subscription system: StoreKit, RevenueCat, later migrated to Adapty.
- Optimized UI rendering and onboarding flows – engagement up 25% (Mixpanel).
- Built a React Native + TypeScript web funnel for paid traffic: users complete their first AI session and buy a subscription on the web, then the session continues seamlessly in the app via deep link.
- Led a mobile team of three engineers: planning, code review, testing. Worked directly with backend, product, design and marketing.

Stack: Swift, SwiftUI, UIKit, MVP-C, async/await, Combine, SPM, StoreKit, Keychain, LiveKit, RetellAI, REST, Mixpanel, React Native, TypeScript.

Aezakmi Group · Middle+ iOS Engineer · Apr – Aug 2024

App Store utility app studio.

- Released 10 iOS apps with an average rating of 4.8, owning the full cycle: development, Apple review, updates.
- Designed a reusable UI component library (UIKit, SwiftUI) and a base architecture template – time to market for a new MVP dropped to 2–4 weeks.
- Set up CI/CD on Codemagic and fastlane: build, signing, release.

Stack: Swift, SwiftUI, UIKit, async/await, Combine, SPM, Firebase, Apphud, fastlane, Codemagic.

APEX BANK · Middle iOS Engineer · Jan 2023 – Apr 2024

Native mobile banking app, Tashkent.

- Built the mobile bank from scratch as part of the team (Swift, UIKit, SwiftUI). Released on schedule, 20,000 customers in the first three months.
- Designed a micro-modular VIPER architecture, then migrated the codebase to MVP-C and split SPM packages into independent layers.
- Wrote the networking layer and integrated the bank's API; sensitive data storage via Keychain.
- Worked in a large product team with mandatory code review and test coverage.

Stack: Swift, UIKit, SwiftUI, VIPER, MVP-C, SPM, SnapKit, Keychain, REST.

Freelance · iOS Engineer · Aug 2022 – Jan 2023

- Built a synchronized group music listening app: AVFoundation, background audio sessions, network latency compensation.
- Cut memory usage by 20%, improved stability.

emovi · Junior iOS Engineer · Jan – Aug 2022

Movie search by emoji, 200,000+ installs.

- Built the client from scratch: UIKit, API integration, search and recommendations, screen states.
- Integrated Firebase, Amplitude, Adapty; optimized performance as the audience grew.

SIDE PROJECTS (2026)

- **Overhyped** – iOS app that fact-checks claims from viral AI videos. SwiftUI, StoreKit + Apphud subscription, backend on Cloudflare Workers + Gemini. In App Store review.
- **Content pipeline for an AI blog** – Telegram bot and Instagram → YouTube/TikTok auto-crossposting on a VPS: Python, queues, cron, social APIs. 1,200+ followers, 80,000 views on top videos.
- **Lead Search API** – lead sourcing service with a partner: marketing side, dashboard frontend, API marketplace listings. First paying customers.

SKILLS

iOS: Swift, SwiftUI, UIKit, Swift Concurrency, Combine, SPM, StoreKit, Keychain, Core Data, AVFoundation, WebSocket, SnapKit

Architecture: MVP-C, MVVM, VIPER, modularization, SOLID, Clean Architecture

Monetization & analytics: Adapty, RevenueCat, Apphud, Firebase, Amplitude, Mixpanel

Cross-platform & backend: React Native, TypeScript, Python, Cloudflare Workers, REST

Process: CI/CD (fastlane, Codemagic), App Store Review, Git, Jira, code review, XCTest, leading a team of 3

AI tooling: Claude Code, Codex, LLM and voice agent integration (LiveKit, RetellAI, Gemini)

Languages: Russian – native, English – B2
